BWP introduces a special line of veneer we call “Textür”.

Dimension is created in the wood through special processing that allows for both visual and textural interest in your designs. We have a variety of standard species available and can offer special production of logs, should your project require. Having received numerous design awards in Europe, we are excited to bring this creative veneer product to the US. BWP offers this product directly to the A&D marketplace as panels, doors and furniture that we produce based upon your design intent.
