## Developments in Laminated Glass

In the business of promoting materials and the specialty production of goods in the architectural market, the life blood to a sustainable existence is without question, rendering ideas for new product development. That might include new materials or simply a new way of using materials already at hand to fit a need you've noticed arise.

A good example of developing a product based on a particular need is our Ostinato™ Laminated production. Still a laminated glass product, but only using one layer of glass.

Developed for originally for furniture manufacturers, this product has also seen a healthy growth in popularity from the millwork trade.

One pane of glass means a much lighter product. And when further laminated to a rigid substrate, it has tremendous resistance to frontal impact.

Thicknesses can be customized as well as can the actual material you're laminating within the composition.

Illustrated here, showing 1/4" on the left and 1/8" on the right. Similarly, you can also use 1/2" and thicker in this process.

Wood Veneers are a favorite in our Ostinato™ Laminated offerings.

We can also offer custom wall coverings, decorative papers, barkskins, metal mesh and a host of other fabrics. See the website for details!

Working with Ostinato™ Laminated glass is easy. Score the back with a glass cutter, gently apply pressure to break the edge and then polish.

The Cube shown is from one single piece of glass, that has not been broken apart, simply folded and then reinforced in place with a clear bonding agent.
