

A Marriage of Two Materials...

The Unique Story of Wood Veneer Laminated into Glass

The story actually began prior to 1991, when at the time, a world leader in the wood veneer industry became involved showcasing the beauty of wood in a very unique way. The development was a joint venture between the Danzer Group, an architect and a glazier.

In the Spring of that year, wood veneer laminated into glass was launched on the world design stage; the venue for which was the Interzum exposition and trade show in Köln Germany.

The Danzer booth was transformed to showcase the unique and awe inspiring product. Large panels of glass showcasing different species of wood were found suspended from wires in some areas of the booth, simply floating in space as works of art. While in other areas of the booth, illuminated walls separated small conference and breakout areas, providing a more structured vision of elegance.

The laminated veneer in glass was enthusiastically welcomed by an audience of architects, designers and artisans attending the show from around the world.

Unfortunately, for whatever reason, the product team did not pursue its development beyond the show that year. The idea however, had still sparked the interest of many who had seen the display, including our founder, Scott Brogan.

Fast forward to 2010...with a vision still in mind

Mr. Brogan met another entrepreneur at the BDNY show in NYC, who owned a company producing laminated glass in Brooklyn NY. As the two talked, and product was reviewed, it became clear to the two gentlemen, that they should join forces and begin a new venture together. Upon acquiring interest within the company, Intermezzo LLC was launched and we were in the laminated glass business. Many other materials are also available laminated in glass as well.

But a distinct advantage Intermezzo has over its competition when specifying wood veneers laminated in glass, is that it's related to a veneer company.....with a visionary at the helm.

Our research has shown that most species can be laminated in glass through our patented process.

The uses and combinations are really only limited by imagination.

If opportunity doesn't knock, build a door.
