Textür in Veneer

Layout · Ralph Lichtensteiger · www.onclickberlin.com · Photography © Todd Weinstein · www.onclicknyc.com

Dimension is created in the wood through special processing that allows for both visual and textural interest in your designs. We have a variety of standard species available and can offer special production of logs, should your project require other species. Having received numerous design awards in Europe, we are excited to bring this creative veneer product to the US. It can be used as paneling, doors, cabinet parts or furniture.
