

## BG Line Steel Wool

New to our BG Line of composite veneers, this pattern was inspired by the industrial look and feel of steel wool. Comprised of American Poplar, we can maintain FSC® Controlled Wood Certification under the principals and criterion of the Forest Stewardship Council.

Being a custom production, we have also produced this veneer to be slightly thicker than normal. In addition, as with any of our custom BG Line veneers, we can also produce composite lumber to match the veneer upon request - minimums will apply.
