Whether you have a base building contract requiring doors on one or multiple floors, doors through an entire tenant space or doors within a specific paneled elevation, Brogan Wood Products has the ability to produce them to your specification.

Flexibility with regard to veneer selection, fabrication and finishing is our niche.

Because it's a niche we've developed, we create our own standards to surpass the norm, just as with anything we produce.

For example, maintaining the same visual integrity across multiple doors on the same floor is important to us.

Therefore, our standard is that all faces and backs of doors located on the same floor shall have the same number of veneer components per door.

A minor detail? We don't think so. We call it a difference.

Our Studio V2, Flush Wood Door, is available rated or non-rated. Light weight versions of the V2 are also available using an engineered substrate or honeycomb aluminum. Lites may also be added in our stile and rail version. Veneer grain can run vertical or horizontal, and even waterfall from the face over the exposed stiles and onto the back side.
